

## Checking Fixture

Fixture type used for the right and left bezel products on the interior of one of these European car manufacturers this type of Checking Fixture (CF). Checking fixture is a measurement tool used to measure the maximum dimension and geometry of a product by using Dial Gauge, so that the precision of the product can be better maintained.

At times the measurements can also be made using the Coordinate Measuring Machine (CMM), where the use is usually done in a special room or in a production.
